# Nitya Lohiya

nlohiya2@illinois.edu | (858) 378-3506 | github.com/nitya-lohiya

## EDUCATION

**University of Illinois at Urbana-Champaign** *Expected Graduation: May 2028*
Bachelor of Science in Computer Science and Statistics *GPA: 3.8; Dean's List*
**Relevant Coursework:** Data Structures and Algorithms, Software Design Lab, Data Science, Advanced Statistics & Probability, Linear Algebra with Computational Applications, Discrete Structures, CS I (Java) and CS II (C++)

## TECHNICAL SKILLS

**Languages:** Python, JavaScript, SQL, Java, C++, Dart, HTML/CSS
**Libraries & Frameworks:** React, FastAPI, Flutter, Firebase, Pandas, NumPy, PyTorch, HuggingFace Transformers, Scikit-Learn, Streamlit
**Tools & Concepts:** Git/GitHub, REST APIs, Neo4j, full-stack development, API design & integration, database management, data cleaning & validation, technical documentation, LLMs, LLM Prompting

## EXPERIENCE

**ITQAN Academy — ATLAS Internship Program** Champaign, Illinois
*AI/ML Software Engineer Intern* *May 2026 – Present*
- Built an LLM-based knowledge-graph pipeline for a free, Khan Academy–inspired learning platform, using schema-based extraction (Extract–Define–Canonicalize) to source, structure, and canonicalize educational concept data from curriculum content.
- Cleaned, validated, and organized graph data to produce an algorithm-ready dataset for a downstream recommendation engine.
- Designed a three-layer adaptive recommendation architecture (Bayesian Knowledge Tracing, Hidden Markov modeling, and a contextual-bandit strategy) to power personalized learning-path recommendations from learner interaction data.

**IDX Exchange** Remote
*Software Development Engineer Intern* *June 2026 – August 2026*
- Built a full-stack real estate listings platform serving RETS-standard property and open-house data from a MySQL 8 database through a Node.js/Express REST API to a React (Vite) frontend.
- Developed the Express backend with a mysql2 connection pool and environment-based configuration, exposing REST endpoints to query and serve property and open-house records from the database.
- Built the React frontend to fetch and render live property listings from the API, and containerized MySQL with Docker for a reproducible local development environment.

**ACM SIG Artificial Intelligence and Data Analytics @ UIUC** Champaign, Illinois
*Project Manager* *Feb 2026 – May 2026*
- Led a 6-person team, handling task delegation and software design to ship a production-ready full-stack ML application.
- Architected a production REST API using FastAPI with 5 endpoints for single and batch email classification.
- Fine-tuned a BERT-base transformer (110M parameters) for multi-class email classification using PyTorch and HuggingFace Transformers, achieving 96% test accuracy across all priority classes within 3 training epochs.

**CS 124 Course Assistant @ Siebel School of Computing and Data Science** Champaign, Illinois
*Java Course Assistant Tutor* *Jan 2026 – Present*
- Guided 30+ students through complex Java assignments, breaking down abstract CS concepts and communicating technical material clearly to non-technical audiences to help them resolve errors and strengthen conceptual retention.

**Syrma Johari MedTech (Medical Device Design and Manufacturing Company)** Rajasthan, India
*Software Engineer Intern* *May 2025 – July 2025*
- Engineered automated Python data pipelines to ingest, clean, and analyze medical device testing data, eliminating manual analysis workflows and accelerating evaluation turnaround time by about 30%.
- Validated embedded software for microcontroller-driven prototypes, identifying and resolving defects to improve reliability and ensure compliance with performance benchmarks.

## PROJECTS

**Open Source Intelligence API @ HackIllinois** | Python, FastAPI, Gemini AI, SPDX *Feb 2026*
- Built and deployed a production-grade REST API using FastAPI and Gemini, exposing 8 endpoints for license risk scoring, dependency auditing, compatibility checking, and AI-powered conflict resolution across open-source packages.
- Acquired and integrated live NPM registry data via async HTTP requests, with robust error handling and validation across various edge cases.

**RSO Connect App (RSO: Student Organizations)** | Flutter, Dart, Firebase, Git *Dec 2025*
- Developed and shipped a cross-platform Flutter app with a 5-person team that centralizes 100+ UIUC RSOs into a single discovery platform for real student users, replacing fragmented outreach across Instagram and spreadsheets.
- Built a real-time event aggregation system that synchronizes decentralized RSO event data into a single unified calendar.

**SpoonBot: Allergy-Friendly Recipe Recommender Chatbot** | Python, Streamlit, REST APIs, JSON *Oct 2025*
- Built a full-stack Streamlit app integrating the Spoonacular REST API and Google Gemini to acquire and parse complex JSON into structured recipe data, mapping user allergy constraints to dynamic API query parameters.
